
Services in Kubernetes

K8s Services Overview

K8s Network Policies

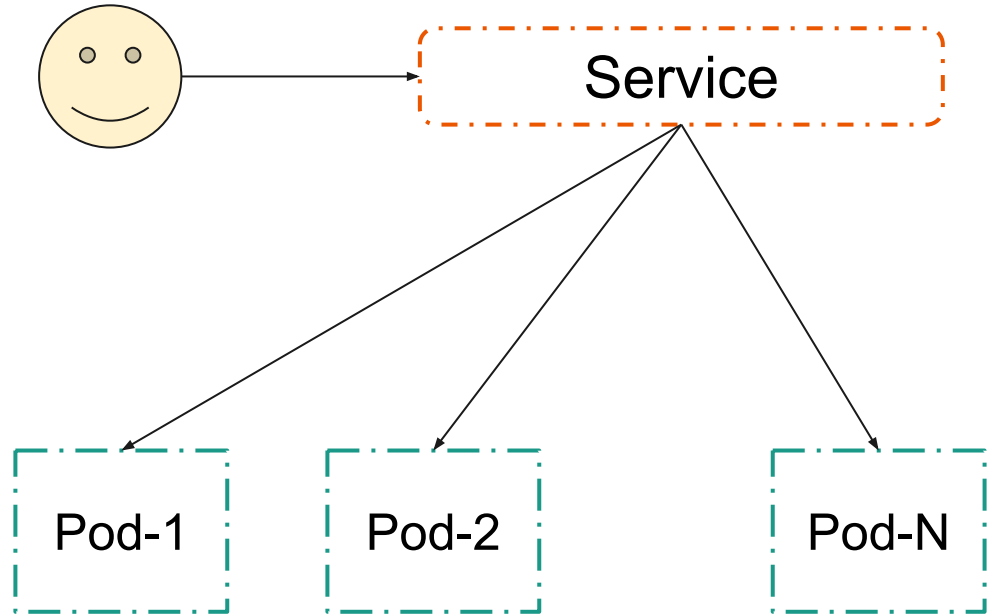

- What is Service
- Service Routing
- EndPoints in Service

What is Service

- K8s Services are used to Access the Pods from Outer World.
- Services are Abstract layer between Pods & Client.
- Services provides a way to Expose Application as a Set of Pods.

Service Routing

- Client make Request to Service, which route traffic to Pods in Load Balancer Fashion.

EndPoints

- EndPoints are BackEnd Entities, to which Service Route Traffic.
- Each Pod have EndPoint associate with Service.

```
kubectl get endpoints nginx-svc
```

NAME	ENDPOINTS	AGE
nginx-svc	10.21.37.55:80,10.21.54.174:80,10.21.56.143:80	21m

Thank You...

Don't be the Same! Be Better!!!
